

CHALLENGES

- Rio Tinto Exploration required the remote building of an accommodation camp.
- BMH Electrics agreed to tailor build the remote camp.
- Needed to be well built but on a low budget.

SOLUTION

1

BMH Electrics made a decision to build the camp out of portable buildings made from transportable sea containers.

2

BMH Electrics planned and assembled the portable buildings in our yard in Malaga.

3

BMH Electrics built these portable containers to Rio Tinto specification. We delivered them to site and successfully installed them.

4

BMH set these up so that testing and tagging compliance could be easily provided in the future.

RESULTS

BMH Electrics provided Rio Tinto an innovative and cost effective remote accommodation solution that can be repeated in the future.

BMH now provides ongoing Testing and Tagging Services, Repairs and Maintenance and Electrical and Refrigeration Projects and Services to both Rio Tinto Copper - Winu and Magnum Exploration site.

BMH have initiated new asset management technology to ensure compliance with our Rio Tinto contract.
